Mantis Multipoint Door Lock

**Cleverly designed to prevent those
unfortunate accidental lock-outs.**

Yale's Mantis door lock offers the best in strength and durability for all types of external doors. Manufactured in the UK, this lock delivers high-performance security and improved ease of use with its new push-in snib feature.

Designed to hold back the door without the lock engaging.

How it works:

Step 1: When the door is in the open position, depress the handle ensuring that all locking points are fully retracted.

Step 2: Using your finger push the latch in the lock, the latch will hold into this position activating the snib feature.

Step 3: To de-activate the snib feature close the door and lift the handle to its highest point. This action will de-activate the snib feature and throw all locking features.

Important note: To secure your door don't forget to deadlock the cylinder using your key or thumbturn.
