Maintenance

Yale recommends the SlotVent is wiped clean at 6-month intervals using a damp cloth. The external hood should be brushed lightly to remove dust and debris.

Material Spec

Internal Vent, External Hood and Flyscreen for Overframe: ASA resin.

ASA resin is commonly used for outdoor applications due to its strong weather resistance, colour fade resistance, UV resistances and mechanical properties. Fixing clips: ABS

10 Year Guarantee

Delivering peace of mind from the world's favourite lock company.

Yale

Trusted every day

THE YALE BRAND

Yale is trusted by millions of people every day to keep what's important to them safe. Our innovations have protected their homes families and belongings for over 180 years. We have expanded from being a leader in mechanical lock engineering to innovating connected smart locks and homes. Because we always make every effort to push the boundaries in a changing world. We were there for your grandparents (and probably $% \mathcal{A}(\mathcal{A})$ theirs) and we'll be there for your children. Today, and every day to come.

Yale SlotVent

Ventilation for a fresher atmosphere

Yale SlotVent

Designed and developed in the UK, Yale's SlotVent allows an appropriate amount of air to pass through the window, helping to remove stale air and reduce condensation and mould, as well as enabling people in cities or near busy roads to benefit from ventilation without having to open their windows.

Allows fresh air in and stale air out without the need to open the window.

Advice to consumers on the benefits of trickle vents

Recommendations by the GGF (Glass and Glazing Federation)

Trickle ventilators and night vent locking systems are the easier methods for providing ventilation when replacing windows. Where security is an issue or draughts will be a problem night vent locking systems are not recommended.

- SlotVent also has benefits for people living in urban or noisy areas, providing valuable ventilation without opening windows.
- Odours and water vapour from cooking, washing, and bathing can be reduced. There is likely to be a reduction in condensation and mould, which could reduce damage to your décor and reduce potential health problems for asthma and
- allergy sufferers.
- are away from home.*

- Potentially harmful airborne pollutants such as emissions from cleaning products, flooring and furnishings can escape from your home.
- Some ventilation systems can be left open to allow ventilation at night or while you

The regulations

Approved Document F provides guidance on meeting building regulations that specifically apply to ventilation and can be seen at (www.gov.co.uk).

Approved Document F recommends that adequate ventilation is provided to prevent excess condensation buildup which could damage the structure of the property. It also ensures that air flows through the property maintaining good levels of indoor air quality.

Building Regulation compliance is important for installation, inspection, testing, commissioning, and provision of information when installing fixed ventilation systems in new and existing properties.

The Yale SlotVent has been designed and tested to comply with The Building Regulations England and Wales requirement F- Means of Ventilation and the Scottish Building Regulations Standard 3.14.

Equivalent area (EA) is a measure of the aerodynamic performance of a ventilator. It is the area of a sharp-edged circular orifice which air would pass through at the same volume flow rate, under an identical applied pressure difference, as the opening under consideration**

Internal foam gasket Reduces air leakage by at least 40%

Components

Internal Vent

- Yale branded
- Pre-fitted clips •
- Vent can be tilted 30, 60 or 90 degrees according to ventilation requirements
- Range includes options for with and without • foam gasket for noise and draft reduction

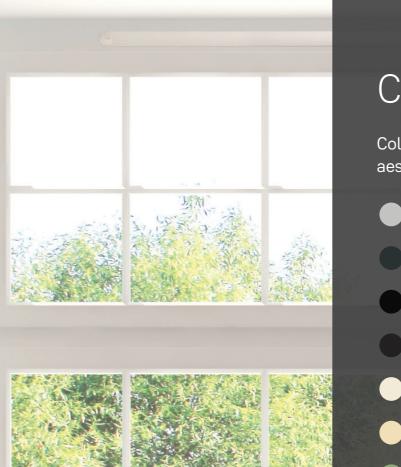

External Hood

- Pre-fitted clips
- Provides ventilation whilst preventing water • from entering the home
- Built-in flyscreen to prevent flies / bugs from entering the home

Flyscreen for overframe

- Typically fitted in an overframe profile section or through the head of the window where an external hood may hamper the opening of the window
- Flyscreen prevents flies / bugs from • entering the property
